SIRIUS Canada Selects Fusepoint For Managed Web and Microsoft Email Exchange Services

Fusepoint's comprehensive Web and email services enable SIRIUS Canada to focus on launching 100 channel satellite radio service with commercial-free music to Canadians

TORONTO, ON – Feb. 14, 2006 – Fusepoint Managed Services, a leading provider of outsourced IT services and infrastructure, today announced it has been selected by SIRIUS Canada to host, manage and maintain a high-performance, high-availability Web site and Microsoft Exchange email solution, including wireless Blackberry support.

SIRIUS Canada began broadcasting in December 2005, delivering Canadians an unrivaled radio experience with the most channels, the best variety and the highest quality of coverage among satellite radio providers in Canada. Since its launch, SIRIUS has experienced tremendous growth and is now the fastest growing satellite radio provider in North America. To allow staff to focus on growing the brand awareness and its subscriber base, SIRIUS Canada decided to outsource the full management of its Web site and email services to Fusepoint Managed Services.

"The SIRIUS Canada Web site is a key asset to our organization and represents a brand promise of an unrivaled radio experience to customers, said John Lewis, vice president, Operations, SIRIUS Canada. "With Fusepoint, we know our Web site and email systems are stable and secure and this allows us to focus on what we do best - providing Canadians with 100 premium channels of the best commercial-free music, entertainment, sports and news on satellite radio."

Fusepoint provides SIRIUS Canada with a fully managed hosting environment - guaranteeing the security, availability and performance of its Web site at all times. Fusepoint also hosts and manages SIRIUS Canada's entire communications infrastructure on Microsoft Exchange including SPAM/content filtering, patch management, 24x7 monitoring, and wireless Blackberry capabilities.

"With SIRIUS Canada staff often traveling and on the go, it is extremely important to have a service provider who can manage email and provide Blackberry support too," added Andre Allen, director of IT, SIRIUS Canada. "SIRIUS was also facing an aggressive time-to-market roll out, and Fusepoint's management of both our Web and email allowed us to dedicate all our efforts on launching the SIRIUS service in Canada."

"Fusepoint is very pleased to be working with SIRIUS Canada to deliver the highest quality online presence available", said George Kerns, president and CEO, Fusepoint Managed Services. "Businesses are realizing the enormous amount of time and resources needed to keep a Web site and email running 24x7, and are instead looking for a full service provider to manage their IT services. By outsourcing critical applications such as Web and email, SIRIUS Canada can focus on the strategic elements of launching the brand and growing its customer base while leaving the back-end and infrastructure management to Fusepoint."

About SIRIUS Canada

SIRIUS Canada is a Canadian corporation owned by CBC/Radio-Canada, Standard Radio Inc. (Canada's largest privately-owned radio network) and SIRIUS Satellite Radio U.S., the fastest growing satellite radio company in North America. The SIRIUS satellite radio service is a world-class digital audio platform that offers Canadians high-quality digital music, news, sports and entertainment programming, including an exclusive lineup of Canadian channels. Key sports programming include NFL, NBA and NHL games. SIRIUS Canada is committed to supporting Canadian musical talent and will spend 5 per cent of its revenues on Canadian talent development initiatives over the next seven years. SIRIUS Canada reaches Canadians wherever they live, from urban centres to the most remote regions of the country. For more information please visit www.siriuscanada.ca

About Fusepoint Managed Services

Fusepoint Managed Services is the leading provider of managed IT services and infrastructure for companies running mission-critical business applications.
